**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Plasser et al (US 3,857,183).

Plasser et al discloses a mounting assembly on a rail car for a measurement device comprised of a securement member 18 that is a cradle member attached to the axle of a wheel 2 of the rail car. A pivot arm 14 is connected to the securement member 18 and has a lever arm extending upward and connecting to a swing arm 20 which connects to a spring component 17 of the rail car. The swing arm is adapted to rotate the top of the pivot arm 14 so that it is maintained at a substantially fixed height above the track surface 1. Each linkage connection for the securement member 18 the pivot arm 14 and swing arm 18 contain bearing to aid in movement of the various components. The swing arm 14 has a distal end mounted to a truck frame 7. A measurement device 11 is mounted at one end of the swing arm 20.

Regarding claims 17-21 drawn to the method of mounting a measurement device. Plasser et al secures a measurement device 11 to a rail car above a track surface and moving the measurement device 11 in response to the movement of a

sprung component 17. The device is further secured by also mounting a pivot arm and swing arm to the assembly.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Trefouel et al (US 5,203,089) and Bloom et al (US 6,725,782) both disclose ways of mounting monitoring devices to rail cars.
